

CFS00108US

**What is claimed is:**

- 1. A sheet cutting apparatus comprising:**  
**cutting means for cutting a sheet bundle;**  
**receiving means for receiving the cutting means;**  
**receiving position moving means for moving a receiving position on**  
**the receiving means for receiving the cutting means; and**  
**counting means for counting a number of cutting times of the sheet**  
**bundles,**  
**wherein the receiving position moving means moves the receiving**  
**position on the receiving means according to information out of the counting**  
**means.**
- 2. The sheet cutting apparatus according to claim 1, wherein the**  
**counting mean counts up the number of the cutting times of the sheet**  
**bundles by counting up a number of moving times of movement of the cutting**  
**means in a sheet thickness direction.**
- 3. The sheet cutting apparatus according to claim 1, wherein**  
**information is given when judgment is made as that the receiving means**  
**reaches a replacement period according to information from the counting**  
**means.**
- 4. The sheet cutting apparatus according to claim 1, and further**  
**comprising detecting means for detecting a moving amount of the receiving**  
**means, wherein information is given when judgment is made as that the**  
**receiving means reaches a replacement period according to a signal from the**  
**detecting means.**
- 5. The sheet cutting apparatus according to claim 1, wherein the**  
**receiving means is rotatable and in a roller shape.**
- 6. The sheet cutting apparatus according to claim 1, wherein the**

CFS00108US

receiving means is rotatable and in a belt shape.

7. The sheet cutting apparatus according to claim 1, and further comprising storing means for storing cut sheet dusts, wherein a cut sheet dust processing in which cut sheet dusts are moved into the storing means is performed by moving the receiving means in association with the receiving position moving means.

8. The sheet cutting apparatus according to claim 7, wherein the cut sheet dust processing is defined as to rotate the receiving means in prescribed amount by the receiving position moving means, and wherein the movement of the receiving means is defined as to rotate the receiving means in a very small amount by the receiving position moving means.

9. The sheet cutting apparatus according to claim 1, wherein the cutting means is in a plate shape.

10. The sheet cutting apparatus according to claim 1, wherein the cutting means is in a disc shape.

11. A sheet processing apparatus comprising:  
conveying means for conveying a sheet;  
aligning means for aligning a plurality of the sheets; and  
a sheet cutting apparatus as set forth in any of claim 1 to claim 10.

12. An image forming apparatus comprising:  
conveying means for conveying a sheet;  
image forming means for forming an image on the sheet; and  
a sheet cutting apparatus as set forth in any of claim 1 to claim 10.

13. An image forming apparatus comprising:  
conveying means for conveying a sheet;  
image forming means for forming an image on the sheet; and  
cutting means for cutting a sheet bundle;

CFS00108US

receiving means for receiving the cutting means;

receiving position moving means for moving a receiving position on the receiving means for receiving the cutting means; and

counting means for counting a number of cutting times of the sheet bundles,

wherein the receiving position moving means moves the receiving position on the receiving means according to information out of the counting means.
